EDUCATION

Noida International University

B.Tech in Computer Science

2023 – 2027
Greater Noida, India

- **CGPA: 8.37 / 10.0**
- **Coursework:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

EXPERIENCE

GitHub Projects & Personal Development

2025 – Present

GitHub (@AKabhishek9)

Remote

- Solved Data Structures and Algorithms problems on LeetCode to strengthen problem-solving and coding skills.
- Built and maintained full-stack web applications using Next.js, React, Firebase, Tailwind CSS, and AI APIs.
- Implemented authentication, role-based access control, and Firestore database operations in production-ready projects.

PROJECTS

Money Ledger | [WebApp](#) | [Next.js](#), [TypeScript](#), [Firebase](#), [Dexie.js](#)

- Money Ledger is an offline-first Next.js TypeScript Firebase Dexie.js accounting and expense-tracking web app. Users keep their own ledgers, track transactions and have balances calculated automatically, with the data still available even when they are offline.
- Data is saved locally with IndexedDB using Dexie.js and synced to Firebase when connectivity is restored. Other features include PDF and CSV export, real-time multi-device sync, and a mobile-first responsive interface designed for daily financial record keeping.

ArkFace | Real-Time Face Recognition System | [.exe](#) | [Python](#), [OpenCV](#), [MediaPipe](#), [ArkFace](#)

- This project is a real-time face recognition system using Python, OpenCV, MediaPipe and ArkFace. The system takes live webcam input, detects multiple faces, extracts facial landmarks and performs real time identity matching.
- The application managed to reach about 90 percent recognition accuracy by utilizing MediaPipe's facial landmark detection and ArcFace-based face embeddings. The model was also tested in challenging situations such as low-light conditions and partial face occlusions, to enhance its reliability and performance for real-world practical applications.

QuizAI | AI-Powered Adaptive Quiz Platform | [WebApp](#)

- QuizAI is a full-stack adaptive learning platform that creates personalized quizzes with artificial intelligence. The platform is built using Next.js, Node.js, MongoDB, Firebase Authentication and Groq API.
- Generates questions dynamically based on the user's performance and it does not repeat the questions which have been attempted before.
- Users get a tailored learning experience with adaptive question selection and progress tracking. The app boasts secure authentication, efficient database management, and cloud deployment using Vercel and Render, offering a scalable and responsive user experience.

SKILLS & ACHIEVEMENTS

Languages: Java, Python, C

Web & APIs: HTML, CSS, JavaScript, REST APIs

Databases: MySQL, MongoDB

DSA: Arrays, Strings, Hashing, Linked Lists, Stacks, Queues, Trees, Graphs, BFS/DFS

CS Fundamentals: Operating Systems, Computer Networks, DBMS (SQL, Normalization)

Tools & Libs: OpenCV, MediaPipe, ArkFace, Power BI, Git, GitHub

HackerRank Orchestrate

Aug 2026

AI Agent Hackathon

Rank #766/1,983

- Directed an AI coding agent to build and deploy an LLM-powered message-routing system under live hackathon constraints.
- Debugged real API and deployment issues to ship a fully working, scored submission.

CERTIFICATIONS

GeeksforGeeks Onsite Workshop – Advanced DSA and competitive programming strategies

HCL GUVI AI Impact Summit – Real-world AI/ML applications and responsible AI deployment

Azisly AI Live Project – Consulting-driven AI business simulation: prompt engineering, AI-based research, corporate reporting
